WHAT I HAVE TO OFFER

- **6+ years** of industry experience spanning next-gen research and production-intent **AV/ADAS** software
- Effective project management, collaborative problem-solving, and programming skills
- Strong research and technical background, evidenced by **5 journal** and **6 conference** publications totaling **220+ citations** and an h-index of 10
- **Research interests:** Multi-modal sensor fusion, Multi-target detection and tracking, State estimation, Deep learning, Bayesian filtering, Probability and statistics, Physics/dynamics-based modeling, Smart automotive systems, Autonomous navigation, Network-based operations

WHAT I AM LOOKING FOR

- Opportunity to learn and apply emerging technologies
- Leading and mentoring a fast-paced engineering team engaged in directed research
- Growth at a company advancing future mobility with a strong ethical stance

SKILLS

- Programming languages and scientific software: C++, Python, MATLAB, Simulink
- Documentation and technical writing: L^AT_EX, MS Office, Polarion

EDUCATION

Purdue University, West Lafayette, IN

Ph.D., Aeronautics and Astronautics Engineering

2017 - 2020

Major: Dynamics and Control, *Minor:* Systems Engineering

Dissertation: Data-driven Learning for Anomaly & Precursor Detection in Metroplex Airspace Operations

Purdue University, West Lafayette, IN

M.S., Aeronautics and Astronautics Engineering

2015 - 2017

Major: Dynamics and Control, *Minor:* Systems Engineering

Thesis: Development of Optimal Kalman Consensus Filter and its Application to Distributed Hybrid State Estimation

Indian Institute of Technology Kharagpur, India

B.Tech. with Honors, Aerospace Engineering

2011 - 2015

Minor: Electronics & Electrical Communication Engineering

Graduated top of class with **University Silver Medal**

WORK EXPERIENCE

PlusAI, Santa Clara, CA

Perception R&D

- **Software Engineer, Scene Understanding** Nov 2024 - *present*
 - Developing multi-modal, multi-view, end-to-end lane-tracking models across camera, radar, and lidar sensing configurations
 - Researching and prototyping novel solutions to the long tail of real-world problems across challenging, diverse scenarios, safely enabling L4 autonomous driving

Aptiv, Troy, MI

Advanced Safety & User Experience

- **Object Tracking Developer** Mar 2020 - Nov 2024
 - Led research to enhance all-round tracking in cluttered scenarios, implemented within automotive-grade processor requirements
 - Collaborated on ideation and development of ‘next gen’ AV/ADAS intended for ambitious automotive software needs of the next decade
 - Conducted industry-related quality assurance tests for ASPICE and MISRA compliance
- **Product Owner – Stellantis Platform Lines** Jan 2022 - Apr 2024
 - Delegated tasks within Object Tracker team – comprising 14 engineers and function owners – by defining and managing a product backlog based on resource constraints and business requirements
 - Served as primary point-of-contact for staging customers’ issues and requirements through triage, root-cause analysis, solution design, reviews, and final integration with Aptiv’s ADAS product
 - Leveraged support and coordination between management and technical teams within Aptiv’s Advanced Safety umbrella to ensure production timelines were met for 2022-2025 Stellantis releases

RESEARCH PROJECTS

PlusAI, Santa Clara, CA
Perception R&D

- **Stable and Robust Lane Tracking** Apr 2025 - *present*
 - Developing KF-based quality metrics for real-time statistical consistency measures (innovation analysis, covariance behavior, residual monitoring) to improve robustness under occlusion and noise
 - Improving BEV lane detection by introducing more representative augmentation, loss functions, oversampling, and shape inference to address tracking failure modes and improve system stability

Aptiv, Troy, MI
Advanced Safety & User Experience

- **Stationary Object Tracking** Oct 2022 - Nov 2024
 - Prototyped algorithms that generate driveable boundary using sensor inputs corresponding to non-driveable structures – guardrails, buildings, parked cars, etc.

Purdue University, West Lafayette, IN
Purdue Flight Dynamics & Control/Hybrid Systems Lab

- **Optimal State Estimation over a Network** Aug 2015 - Jan 2020
 - Addressed decade-long problem of suboptimality in Kalman consensus filtering utilized in sensor network theory and network fault detection
 - Developed optimal Kalman consensus filter applied to stochastic LTI and hybrid targets; applicable to fully-distributed state estimation for connected and autonomous vehicles
- **NASA Big Data Analytics Project** Nov 2017 - Sep 2019
 - Investigated data-driven methods to discover previously unknown safety threats within large, heterogeneous datasets representing operations of the National Airspace System
 - Designed machine learning-based anomaly detection and prognosis algorithms for operational and safety issues using real air traffic datasets recorded at LGA, JFK, and EWR airports in NY metroplex
 - Collaborated with Mosaic ATM and Honeywell Aerospace to develop a deployable, scalable, and versatile simulation environment, to enhance decision-making in air traffic management systems
- **NASA Next-Gen Concept Technology and Development Project** May 2016 - Oct 2017
 - Designed novel hierarchical supervised learning algorithm to generate conflict resolution strategies learned from flight plans and aircraft track data, collaborating with Optimal Synthesis Inc.
 - Emulated ATC's decision for more than 72% events and generated safe resolutions for 100% events

SCHOLASTIC HONORS

Best Paper in Complexity Track

Awarded at the 13th FAA/Eurocontrol ATM Seminar held in Vienna, Austria, for the paper titled 'Data-Driven Precursor Detection Algorithm for Terminal Airspace Operations'; subsequently expanded into a journal publication in the *Journal of Air Transportation*

University Silver Medal

Awarded for graduating at the top of my undergraduate class

Jagadis Bose Scholar

Awarded through the Jagadis Bose National Science Talent Search, which identifies and nurtures talented young STEM students in India with potential for leadership in innovation
